

Marin Ramp Metering Project US-101

PROJECT DESCRIPTION

The California Department of Transportation (*Caltrans*) will begin construction of the **US 101 Ramp Metering project** in **Marin County** in **Cities of Sausalito, Marin, Mill Valley, Tiburon, Corte Madera, Larkspur** and **San Rafael** in **April 2019**. This project will install Ramp Metering Equipment and Traffic Operations System (TOS) at various locations, widening US 101 on-ramps to accommodate High Occupancy Vehicle (HOV) bypass lanes and increase their storage capacities and maintenance vehicle pullouts. When completed, this project will reduce traffic congestion and delays, improve safety and operation and provide more efficient movement of commuter traffic on northbound US 101.

The proposed work includes installation of Ramp Metering equipment and TOS elements at ten locations, on northbound US 101 from Golden Gate Bridge to Sir Francis Drake Blvd, including the widening of US 101 on-ramps at Tiburon Blvd. off-ramp and loop on-ramp, Tiburon Blvd. westbound and Diagonal on-ramp and Sir Francis Drake Blvd. on-ramp. TOS elements will include off-ramp inductance loops, repair of existing Changeable Message Signs (CMS), and installation of a new CMS. The project will also widen eastbound Tiburon Blvd (Route 131) from North Knoll Road to northbound US 101 on-ramp at Tiburon Blvd.

WHAT TO EXPECT

Motorists will encounter intermittent lane/ramp closures, temporary detours, and increased heavy construction equipment movements during the day and night time hours on northbound US 101 and Tiburon Blvd. (Route 131). Advanced notification regarding exact time of the lane/ramp closures and detours will be provided as they become available. All work is weather permitting.
